PASSIONE

FULGOR MILANO, draws its roots from the know-how of the area in which it was born and developed, from the desire to combine beauty and practicality, innovation with elegance, forms with the rigorous style of design that interprets and anticipates the needs of everyday life in a continuous way.

FULGOR MILANO

If new technologies are introducing new horizons and new opportunities, new demands and new satisfactions in everyday life, which nourish the need for change and improvement that is inherent in human beings; the ability to choose in overlapping proposals is the result of greater information and knowledge that the new technological tools allow to acquire in ever less time but with a greater breadth and depth.

The conviviality of our life must be ensured by beautiful, easy, simple and performing tools that allow us a greater availability of time for interpersonal relationships, to enjoy the presence of our family and friends sitting at a table to savour the results of our best culinary art.

This is why FULGOR MILANO offers more and more proposals for those who love to cook, to become the CHEF of their own home, and for those who love cooking intensively with the new CLUSTER CONCEPT series where, in addition to the technological content, new design solutions are offered to interpret those style and trends in continuous evolution, but with the aim of making them lasting over time.

WITH FULGOR MILANO LIVING BETTER IS POSSIBLE

Giour Ausophetti

General Manager

CLUSTER CONCEPT OVENS

NEW INTERIOR

Ovens with the pyrolysis cleaning cycle have a new interior that includes two side light points for greater visibility.

COOL TO THE TOUCH DOOR

The door is designed to contain the heat inside the oven during cooking or the self-cleaning cycle by pyrolysis, with a temperature on the outside layer of less than 50° C.

The combination of the obsidian black of the glass and the brushed metal components of the control panel and the handle create a new symbiosis between two materials, as in the creation of a precious jewel.

SOFT CLOSING DOOR

The CLUSTER COMPACT ovens offer the door with a soft closing mechanism that dampens the movement and makes it easy to close with a simple push, even if the user has his hands engaged by the extracted tray.

MAXIMUM TEMPERATURE

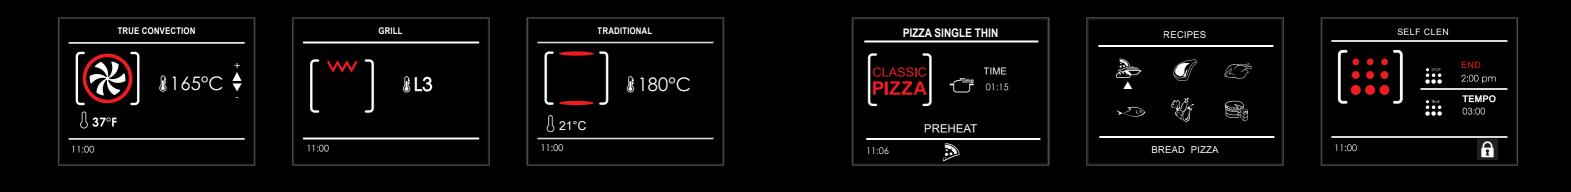

With the new operating system, the maximum cooking temperature has been raised to 290 °C for self-cleaning ovens.

CREACTIVE

EXTENDED

No more uncertainties in choosing the cooking function that is most suitable for your need. Simply select the recipe on the display and the oven will automatically start the most suitable cooking program. You can change the recipes to be set to suit your needs by varying the weight, temperature and cooking time. This system improves performance by reducing energy consumption, while increasing cooking functions. Safer, thanks to the automatic system of control of the operating status that warns and prevents damage.

MULTI COOKING LEVEL

The heat is distributed evenly inside the oven and remains constant, while the aromas of the different dishes remain separate thanks to the assisted ventilation system.

GRILL

The most effective way to brown the outside of a steak and a roast, while it is melted in its sauce to retain the degree of tenderness.

TRADITIONAL CUISINE

Perfect for optimal cooking, the flavours blend naturally with the heat evenly distributed in the oven.

PIZZA MODE 350° C

Simultaneously cook two pizzas of regular size in just two and a half minutes at a maximum temperature of 350° C.

CUSTOMIZABLE RECIPES

The cooking times and methods have been set into production, but it is possible to modify and customize the recipes to suit your needs.

THE OPERATING SYSTEM FOR ASSISTED COOKING

SELF-CLEANING

The self-cleaning function by pyrolysis, selected directly on the display, consists in heating the inside of the oven up to very high temperatures (465° C) to burn off any residual fat or food in excess. At the end of the cycle it is enough to remove the resulting ash with a damp cloth without the use of detergents.

INDUCTION HOBS

INDUCTION HOBS

ONE TOUCH SAFETY AND CONTROLS

$\wedge RI \wedge +$

COOKING HOBS

Electromagnetic fields are present everywhere in the environment around us and are produced both from natural sources but increasingly from artificial sources. The technological progress of human beings is based on the production and exploitation of energy and the electricity grid: where it is present and used, alternating electric and electromagnetic fields are formed.

Induction hobs exploit the electromagnetic field to produce heat by contact, offering considerable advantages in terms of use:

- Producing heat with energy savings
- Quick boiling time •
- Precise and effective regulation •

FULL POWER

A new control system that allows you to set the functions enclosed in its panel, with touch-sensitive controls, programming the operating times and the exclusive functions proposed.

ASSISTED COOKING

For each cooking zone there are 3 automatic cooking levels available:

- 42° C melt seasonings and chocolate
- 70° C heating cooked food
- 94° C to boil the water

INTEGRATED VENTING

The FCLH 8041 HID TS BK model incorporates a hood with high power and low consumption, for the extraction of fumes and odours during the cooking activity.

FLEXI ZONE

Present in these models, it allows to combine the cooking space between different zones to accommodate large pans.

COOKING ZONES THAT DO NOT HEAT UP

or less danger of burns, or less danger of fires, or greater ease of cleaning

INCREASED SECURITY

Automatic recognition of the pot. Heating function active only in the presence of the pot

DEDICATED POTS

To promote optimal operation at low emission values (electromagnetic), the quality and properties of the pans are essential requirements. Use pots of uncertain composition, even if bearing the symbol of the predisposition for induction, could create malfunctions during cooking with intermittent or irregular activities that would adversely affect the results.

burners and LED controls. The new CLUSTER CONCEPT gas tops combine elegance, performance and flexibility.

FULGOR MILANO 31

HALO-LIGHT

An innovation that allows the user to know at a glance whether the burner is lit by a white light around the knob (Halo Control) or if there is residual heat after use, through a red light around the knob (Halo Safe), for greater security and peace of mind when moving away from the kitchen.

MATERIALS

Innovating the tradition means also using materials such as glass ceramics to house the new high efficiency brass burners.

TIMER

It allows to set cooking times with maximum precision, visible in the digital display from 1 min up to 2 hours, cutting the gas at the end of the period.

CAST IRON GRATES

Sturdy cast iron grates, of a professional type, but elegant in design, allow a continuous use of cooking for long periods with the certainty of keeping a surface always aligned.

DECLARATION OF THE MANUFACTURER

The manufacturer declares that, depending on their type, the products in this catalogue conformto the fundamental requirements of European Directives and, for this reason, the product bears the CE mark, for which this declaration of conformity was issued and made available to market supervisory bodies.

DISPOSAL OF USED APPLIANCES

At the end of their useful life, these appliances may not be disposed of with normal urban waste,but must be delivered to a collection and recycling point for electrical and electronic equipment. This is indicated by the symbol shown on the product, in the instruction manual or on the packing materials. The materials used in this appliance can be reused in conformity with their intended use. Thanks to the reuse, recycling or other forms of recovery of unusable appliances, you will make a contribution to protecting our natural environment. You can obtain information about the disposal points for unusable appliances from your local authorities.
